How a visitor gets the landing page

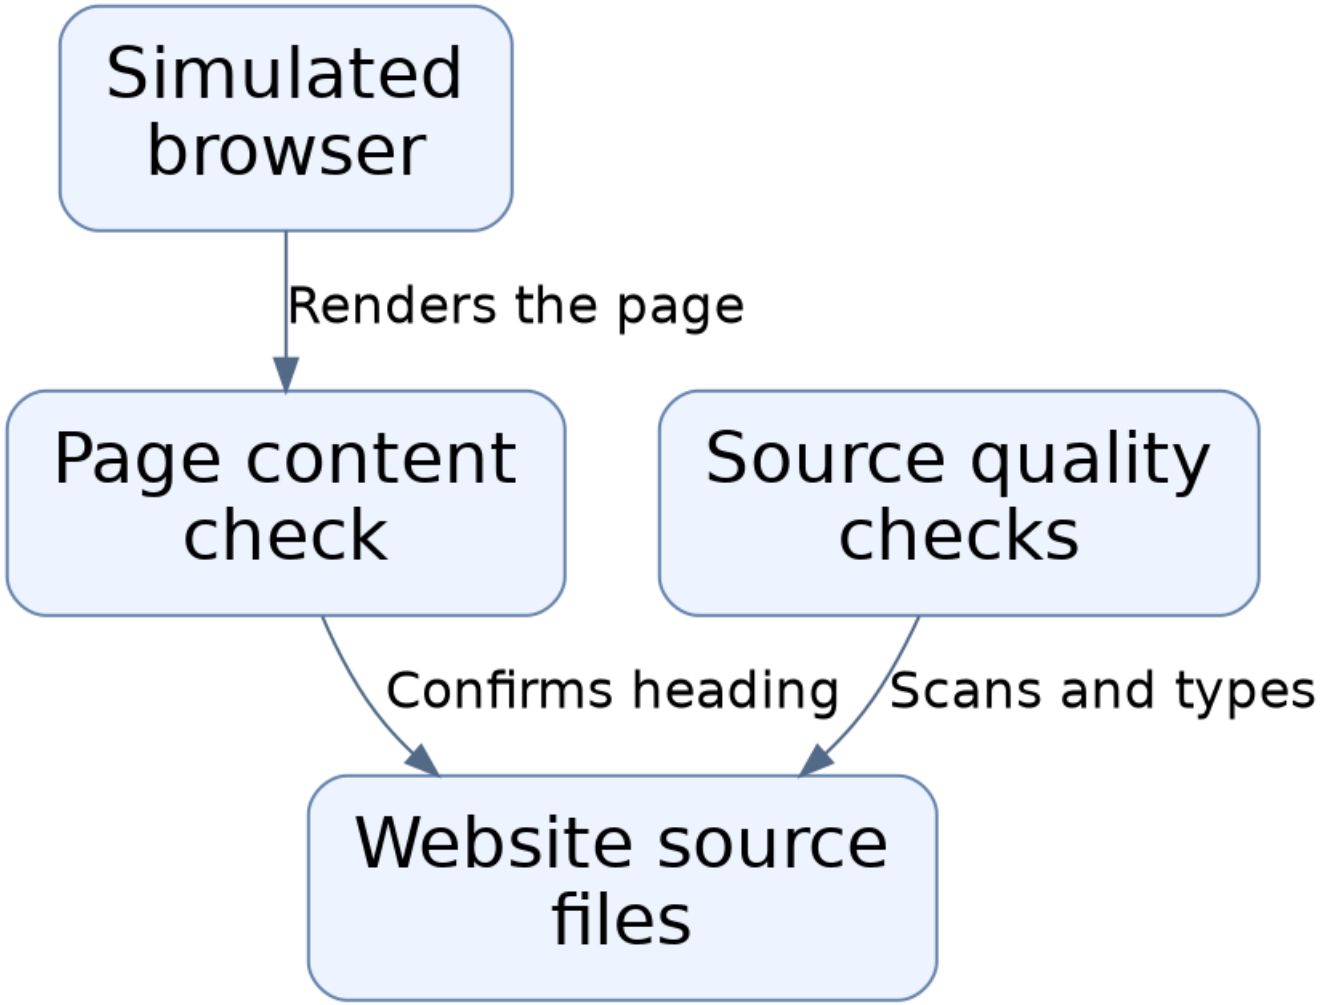

A visitor opens the site, the page shell supplies styling and page title, and the static landing content appears. Nothing is looked up or saved, and no search runs.

Read from top to bottom. Arrows show the direction of the interaction.

How the page is checked before release

Automated checks run the landing content in a simulated browser and verify the heading text, while code-quality tools scan the source. These checks do not exercise any search or backend behavior.
