How a question becomes a saved answer

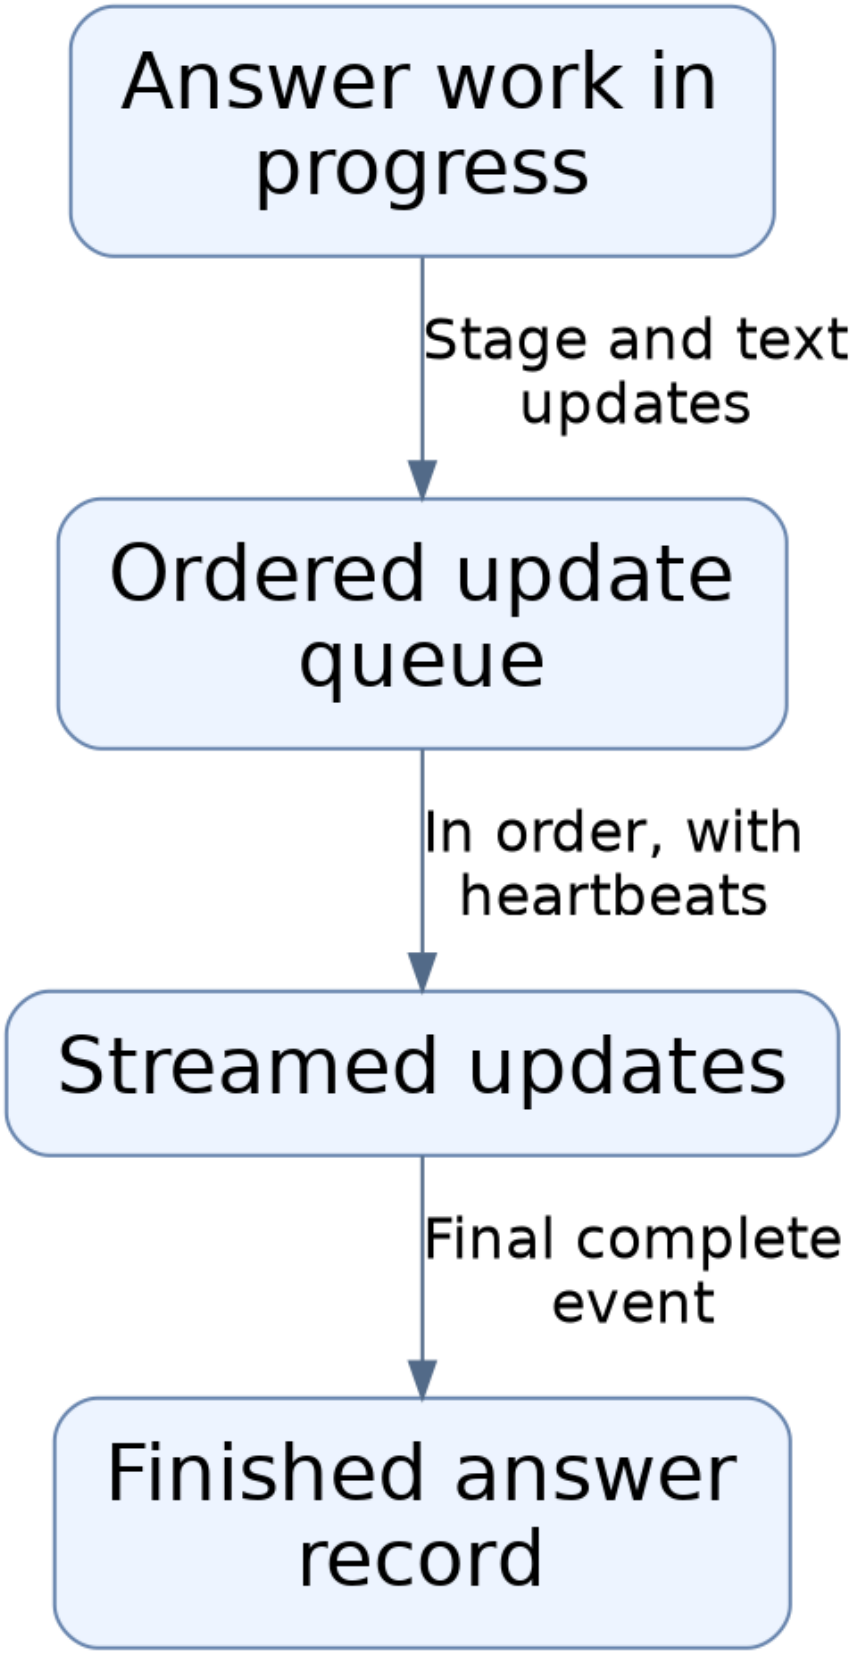

Someone asks a question; the system finds their permitted passages, the model writes a checked answer streamed live, and the finished answer is saved for that person.

How a live answer reaches the reader

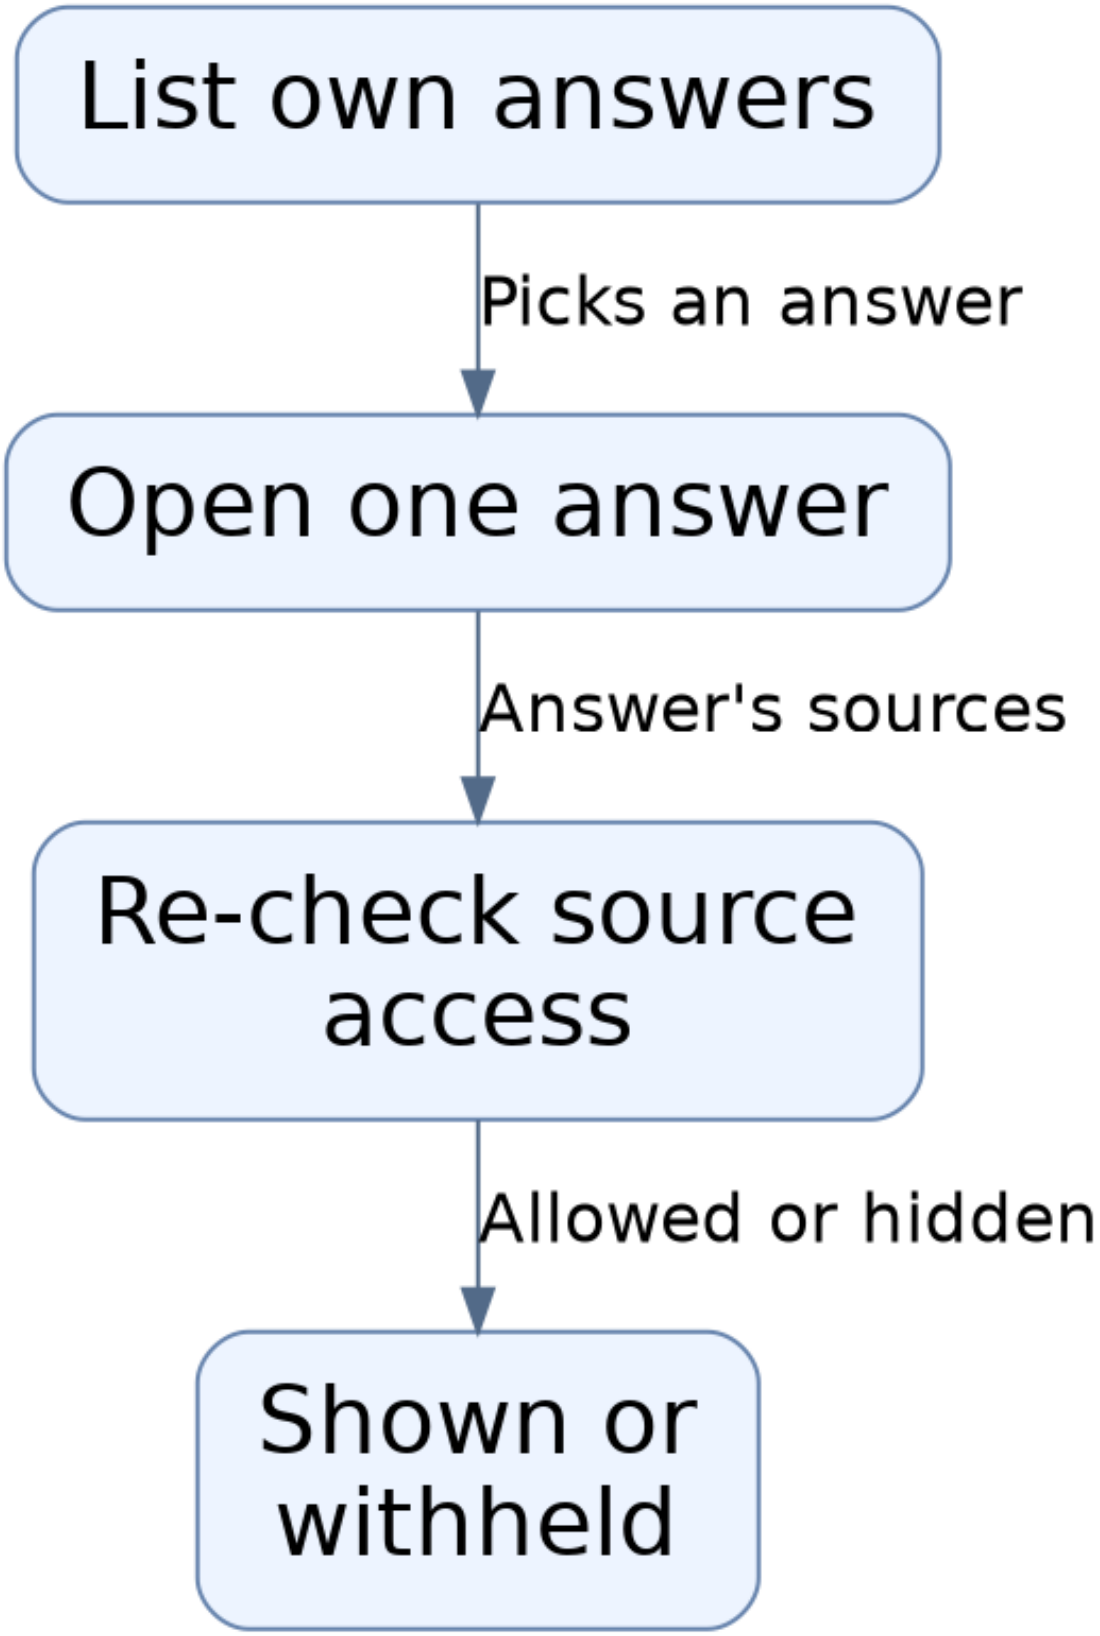

While the model writes, small updates flow to the reader in order, ending with one complete record that names the saved answer.

Viewing saved answers later

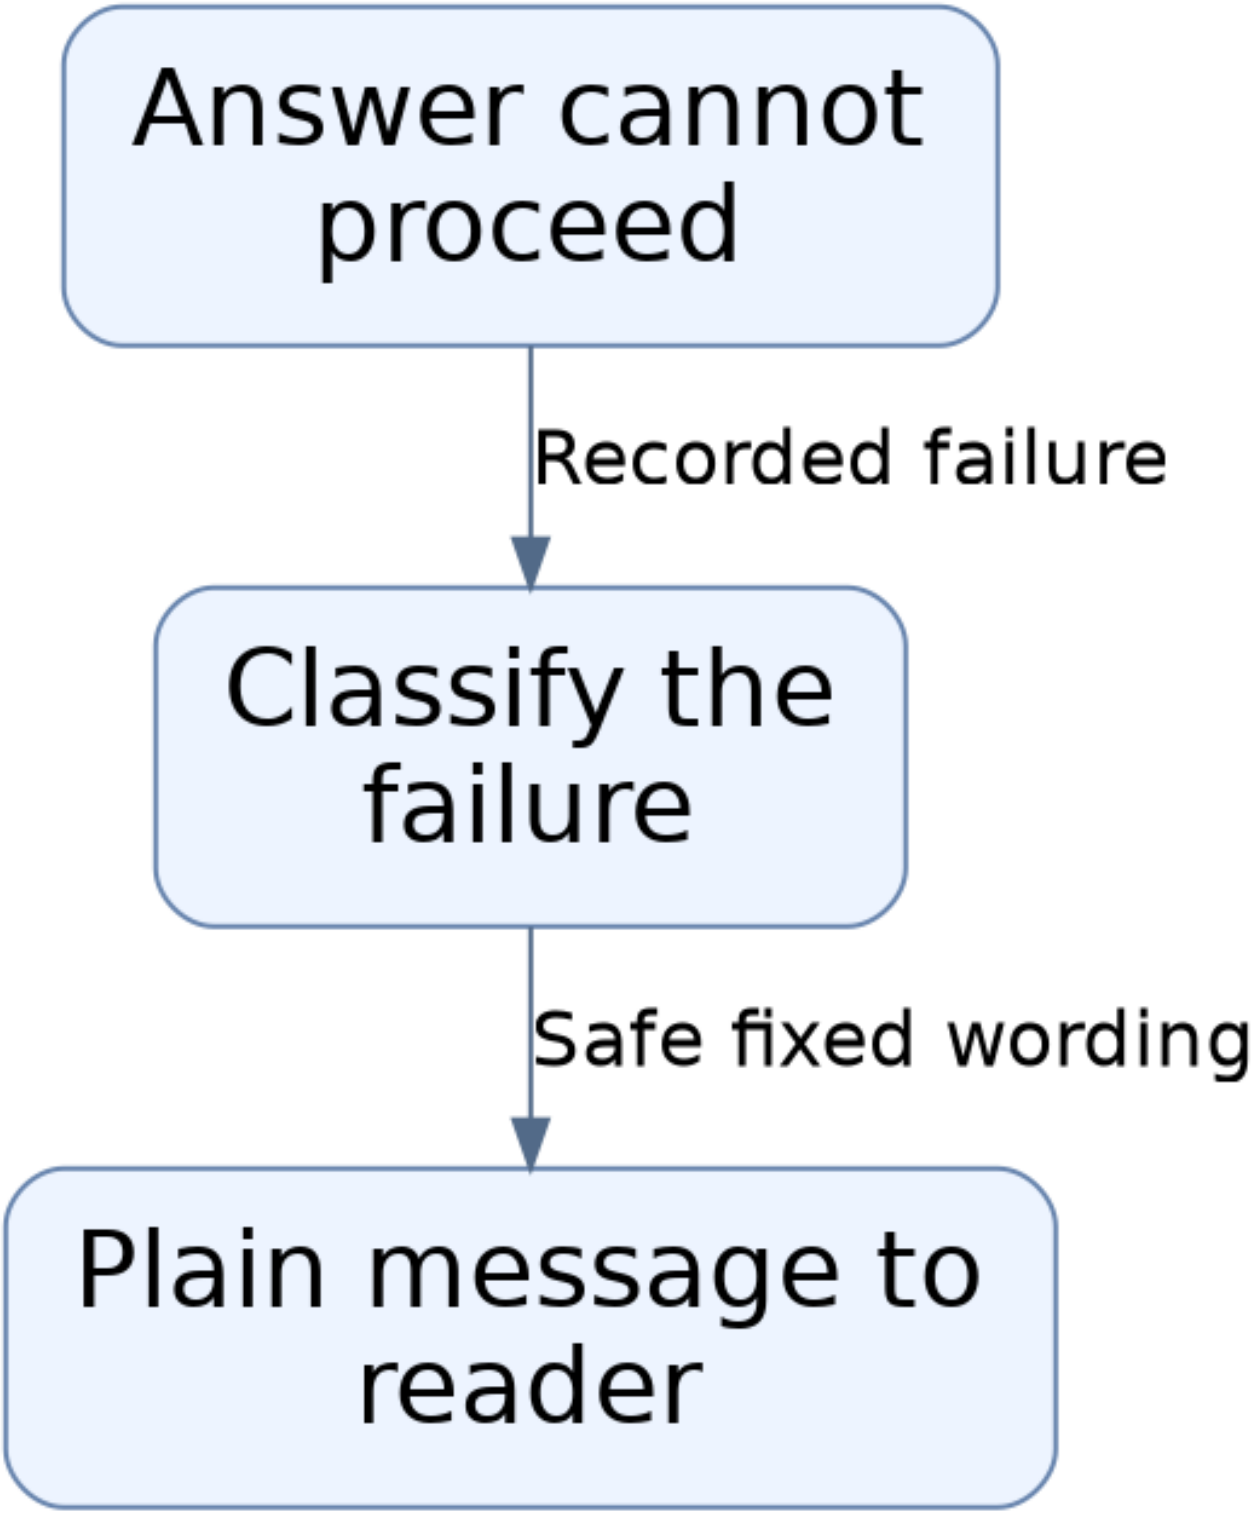

A person lists their own past answers and opens one; access to the original passages is re-checked each time, so withdrawn sources hide the answer text.

When the answer cannot be produced

Missing permitted passages, timeouts, model faults, or unverifiable drafts become one clear message for the reader, never raw internal detail.
